### **Protein Sequence Searches - February 2005**

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-09-252-991A-26438
Sequence 26438, Application US/09252991A
Sequence 26438, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                Sequence 19167, Application US/09252991A

Fatent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILER REPERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PILING DATE: 1998-02-18
PRIOR PILING DATE: 1998-02-18
PRIOR SELING DATE: 1998-02-18
PRIOR SELING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 27, Application US/09676519

Patent No. 6737508

GENERAL INDORMATION:
APPLICANT: PELLETIER, JERRY
APPLICANT: PELLETIER, JERRY
APPLICANT: BUBGW, MICHAEL
TITLE OF INVENTION: DAS EQUIENCES FROM STAPHYLOCOCCUS AUREUS BATERIOPHAGES
TITLE OF INVENTION: JA, 77, AND 96 THAT ENCODE ANTI-MICROBIAL POLYPEPTIDES
TITLE OF INVENTION NUMBER: US/09/676,519
CURRENT APPLICATION NUMBER: 094407,804
PRIOR FILING DATE: 1999-09-28
PRIOR FILING DATE: 1999-09-28
PRIOR FILING DATE: 1999-120-3

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

#### **Search Notes**

Examiner Portner,

Please review the attached search results.

If you have any questions or if you would like to refine the search query, please feel free to contact me at any time.

Thank you for using STIC search services!

Paul Schulwitz Technical Information Specialist REM-1A65 571-272-2527

#### November 2005

Published\_Applications Nucleic Acid and Published\_Applications Amino Acid database searches now generate two sets of results each. The Published\_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published\_Applications\_New databases; older published applications make up the Published\_Applications\_Main databases.

Searches run against Nucleic Acid Published\_Applications produce two sets of results, with the extensions rnpbm (Published\_Applications\_NA\_New).

Searches run against Amino Acid Published\_Applications produce two sets of results, with the extensions rapbm (Published\_Applications\_AA\_New).

```
The present sequence represents sefA found in the sef gene cluster from Salmonella enteritidis. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Bnterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms.                                                                            ö
                                                                                                                                                                                                                     This sequence is a fragment of the Salmonella enteritidis (Se) Sef14 protein, encoded by the sefA gene. The method of the invention is for detecting antibodies (Ab) against Se in an animal by treating a sample with a truncated Sef14 antigen (Ag), lacking at least the native Sef14 signal peptide, and detecting any Ab-Ag complex formed. Detection (by enzyme-linked immunosorbent assay or agglutination tests) of the Ab is used to diagnose Se infection in birds, especially chickens and turkeys. The Ag can also be used in vaccines to protect poultry against Se infection. Detection of the Ab is a sensitive, specific method for reliable and routine screening of animals. The Ag are easily produced in large quantities, in pure form, without requiring special growing conditions, so are suitable for large scale screening of flocks

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents the fimbrial Sef14 antigen of Salmonella enteritidis. The specification describes a method for detecting S. enteritidis in a biological sample obtained from poultry. The method comprises contacting the sample with an antigenic fragment of S. enteritidis fimbrial or flagellin protein and detecting the formation of a complex, where the fragment is specifically recognized by S. enteritidis antibodies. The antigenic fragments are specific to Salmonella enteritidis and enable specific detection of S. enteritidis even in the presence of other Salmonella spp. The methods are useful for the specific detection of S. enteritidis derived from poultry
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DGQGQPVFRGRIQGANINDQANTGIDGLAGWRVASSQETLAVPVTTFGKSTLPAGTFTAT 120

                                                                                               RESULT 4
```

```
The sequence given is Salmonella enteritidis fimbrial antigen (SBPA). Salmonella organsisms have fimbria-like structures on their surfaces and it has been suggested that there are antigenically distinct types of fimbria, ie. possesing specific epitopes on the fimbrial antigens. This sequence has an amino acid sequence which forms an epitope on the fimbria enteritidis, and some strains of the species S. dubin and S. woscow but which is appparently absent in virtually all other serotypes. This antigen can be used for testing for the presence of Salmonella microorganisms in clinical samples such as animal remains or prods., food samples and infected environmental samples.                                                                                                                                                                                                                                                                                                                                 This sequence is a fragment of the Salmonella enteritidis (Se) Sef14 protein, encoded by the sefA gene. The method of the invention is for detecting antibodies (Ab) against Se in an animal by treating a sample with a truncated Sef14 antigen (Ag), lacking at least the native Sef14 signal peptide, and detecting any Ab-Ag complex formed. Detection (by enzyme-linked immunosorbent assay or agglutination tests) of the Ab is used to diagnose Se infection in birds, especially chickens and turkeys. The Ag can also be used in vaccines to protect poultry against Se infection. Detection of the Ab is a sensitive, specific method for reliable and routine screening of animals. The Ag are easily produced in large quantities, in pure form, without requiring special growing conditions, so are suitable for large scale screening of flocks
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 DGGGQPVFRGRIQGANINDQANTGIDGLAGWRVASSQBTLAVDVTTFGKSTLPAGTFTAT

The invention relates to an isolated NoVX polypeptide (of 44 disclosed) comprising its mature form, a sequence having at least 95% sequence identity to NoVX or a sequence comprising one or more conservative substitutions in the amino acid sequence of NOVX. Also included are a composition comprising NOVX and a carrier, a kit comprising, in one or conservative method for identifying an agent that more containers, the composition, a method of identifying an agent that composition and pathology related to aberrant expression or aberrant physicological interactions of NOVX, a method for screening for a coulator of activity of or of latency or predisposition to a pathology associated with NOVX, a method of treating or preventing a pathology associated with NOVX, a method of treating or preventing a pathology associated with NOVX or a pathological state in a mammal, an isolated nucleic acid molecule, conciding a NOVX protein, a vector comprising the mucleic acid molecule, a conciding a NOVX protein, a vector comprising the mucleic acid molecule or a cell comprising the vector, an attibody that immunospecifically binds to nucleic acid molecule in a sample, a method for determining the presence of or predisposition to a disease associated with altered levels of expression of NOVX or the nucleic acid molecule in a sample, a method for determining the presence of or predisposition to a disease associated with a luman disease associated with a numan disease associated with NOVX. The polypeptides under the manufacture of a medicament for treating a syndrome associated with a human disease associated with NOVX. The polypeptides and uncleic acid molecules are useful in diagnoshing, treating or preventing disease, anxiety, pain, diabetes, graft versus host disease, multiple solerosis, anxiety, pain, diabetes, graft versus host disease, multiple solerosis, anxiety, pain, diabetes, graft versus host disease, parcetications (many more diseases and diseases and diseases and diseases and diseases and diseases and diseases and disea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New NOVX polypeptides and polymucleotides, useful in diagnosing, treating or preventing diseases or conditions, e.g. autoimmune disease, Alzheimer's disease, diabetes, graft versus host disease, cancer or viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           R, Padigaru M, Guo X, Kekuda FJi W, Pena CEA, Burgess CE;Casman SJ, Rothenberg ME;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 2; SEQ ID NO 72; 342pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymucleotide encoding a polympetide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant comprising the recombinant DNA construct and growing the transformed plant with the recombinant DNA construct and growing the transformed plant, where the recombinant DNA construct is useful for improving plant with the recombinant DNA construct is useful for producing plant properties. The recombinant DNA construct is useful for producing plant with to improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress conduction. This sequence represents a bacterial polypeptide used in the conduction. This sequence represents a bacterial polypeptide used in the company of the printed specification but was obtained in electronic forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

The present invention relates to an antibody (I) that binds to an antigen that is differentially expressed between lung cancer tissue and normal tissue, where the antigen is encoded by AD37525. Also disclosed are polypeptides (AD37573-ADY37618) encoded by lung cancer related genes (AD373752-ADY37572), their fragments, analogs or derivatives; producing lung cancer related polypeptides; and a diagnostic kit for detection and disease management of lung cancer. (I) is useful for characterizing and analyzing biological activity and function of the lung cancer-specific gene products in relation to cellular pathways and networks in normal and disease states, purifying the cancer specific gene products, and detecting lung cancer. (I) is also useful for diagnosing, treating or preventing lung cancer, and also disorders related to abnormal cellular differentiation, proliferation or degeneration.
                                                                                                                                                                                                                                                                                                                                                                                             New antibody specific for an antigen differentially expressed between lung cancer tissue and normal tissue, useful for diagnosing, treating or preventing lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Cellulomonas sp.

```
The invention describes the nucleotide sequence of a novel endochitinase gene derived from Cellulomonas sp. GM13 strain. Also, provided is the amino acid sequence translated therefrom. Therefore, chitin oligosaccharide and NAG can be manufactured from chitin by using an endochitinase encoded by the novel endochitinase gene. This is the amino acid sequence of the novel endochitinase protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

The invention relates to isolated polymucleotide (I) and polypeptide (II) concerned. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed concerning in diagnostics as expressed sequence tags for identifying expressed control of the control of the control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of control of

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
